Choose your ABA panel

Select the format, surface and connection as one product. Start with the indicative ranges below; the performance values apply only to the configuration covered by the matching technical evidence.

01 Indicative panel formats

Widths	Approx. 950-1200 mm
Lengths	Approx. 2400-2800 mm
Thicknesses	Approx. 6-12 mm
Surface direction	Matt or high gloss; decor, print route and connection selected together

Listed options do not establish every possible combination. Availability, usable coverage, packaging, minimum quantity and lead time are confirmed for the selected programme.

02 Configuration-specific performance

The values below apply only to the assessed configuration. Confirm the matching technical evidence for the selected product.

Water absorption, 24 h	Average at most 0.7% under ISO 62
Thickness swelling, 24 h	Average at most 0.7% under ISO 24336
Scratch resistance	Pass at least 20 N under ISO 1518-1; visible surface scratch, no substrate penetration
T&G joint test	No leakage after 24 h; result limited to the tested joint and test protocol
Reaction to fire	D-s3,d2 under EN 13501-1, subject to its classified installation scope

> Fire scope: adhesive fixing onto A1 or A2-s1,d0 substrates. The selected product, finish and mounting must match the applicable classification. D-s3,d2 is not a fireproof or non-combustible designation.

Water-test values describe the stated specimens and methods, not a complete shower system. Confirm the applicable technical and installation requirements for the panel being ordered.

Build a useful panel brief

A few concrete choices help identify the right version, sample set and quotation. You can bring this outline to a product discussion before every detail is decided.

01 Your project and collection

Market and channel	Destination country; distributor, importer, DIY chain or private-label brand
Application	Shower / bathroom walls, interior walls, or a mixed collection
Panel direction	Preferred width, length, thickness and connection; note undecided items
Decor and finish	Design direction, matt or PET gloss, and any pattern sequence
Commercial outline	Indicative first order / annual programme, timing and private-label scope

02 The sample and document set

Samples that answer real questions

- A full-size panel for handling, cutting and layout.
- Joined panels showing the selected edge and decorative sequence.
- The actual finish and compatible accessory samples.

A file for the actual version

- The current specification and product revision.
- Matching test/classification scope and installation details.
- Care guidance and destination-market documentation.

03 Accessories and private-label packing

List each joining, corner, end or other profile with its quantity, length, finish and compatible panel thickness. Add the branding, packaging, installation literature and replacement requirements for the collection. The accessory programme's 8 mm notation does not establish compatibility with every 6-12 mm panel.
